

IPm Web Server Interface OEM Software License Agreement

OEMs have asked SIXNET for tools to create web pages to be served from their applications running in IPm controllers and RTUs. In response, SIXNET has created SXIPm-Web interface software.

We have configured the “lighttpd” web server to run in an IPm. This GPL (General Public License) software as its name implies is “light” on resource usage in the IPm but is never-the-less packed with valuable features such as support for secure web access (https://). We have created a “fast CGI” program that provides an efficient interface to I/O register data in the IPm. This fast CGI software is the Intellectual Property of SIXNET and may only be used in accordance with this Software License Agreement. Using any web development tools (Microsoft Front Page, Macromedia Dreamweaver, ...) you can create web pages that dynamically display process relevant data. Standard web techniques such as Java Script may be used to format your pages, but of course you know that – this is truly open architecture software from SIXNET.

What SIXNET Supplies:

These tools have been developed for OEMs and as such have a creative open system OEM software license. For a one-time fee of \$1000 (paid directly to SIXNET, LLC), SIXNET will supply the pre-configured GPL web server, a license to use the SIXNET fast CGI program, documentation, sxweb.tgz (installable script), and a sample application.

What You Are Permitted to Do With This Licensed Software:

You are licensed to create as many web pages and separate applications as you wish and to distribute the web pages that you create to anyone that you wish along with the associated run-time software supplied with this license so that your web pages may be viewed as part of your IPm-based products.

What You Cannot Do:

Except as set forth herein, as a licensee of this software, you may not copy, sell, transfer, loan, rent, lease, sub-license, modify, create derivative works or alter the SIXNET fast CGI program, without the express written consent of SIXNET. You may not reverse engineer, decompile or disassemble the Fast CGI software. or otherwise attempt to derive source code from the Licensed Software. This software is the Intellectual Property of SIXNET, LLC and is not GPL software.

You also may not sub-license the right for others to create their own web pages by using the Fast CGI software supplied with this license. If any third party wishes to create their own web pages they are required to obtain a software license of their own from SIXNET.

What Else You Must Agree to:

When you purchase this license you agree to these terms as a condition of accepting and using this software:

1. You accept and agree to this license and to abide by the conditions stipulated herein.
2. You accept the terms and conditions of the SIXNET IPm OEM License Agreement incorporated into this document by reference (a copy is published in the Help files of the I/O Tool Kit software) and will be supplied to you separately upon request. This Intellectual Property Agreement gives you permission to add your applications and apply your trademarks to IPm-based products. It also asks you to agree to protect SIXNET Intellectual Property.
3. You agree that you are fully responsible for the content of the web pages you create, and the subsequent distribution and licensing of your creative work. You agree to fully indemnify SIXNET from any liability and against all perils that may arise from the use of this licensed software and any

derivative work that may result from its use by you or your subsequent sub-licensees, including but not limited to indemnification against all claims of Intellectual Property infringement that may result from your use of this software and the products you create and bring to market. Additional terms of indemnification are included in the IPm OEM License

4. You agree to only run this software in IPm controllers purchased from SIXNET or a SIXNET distributor.
5. You understand and agree that this licensed software is used in conjunction with the SIXNET I/O Tool Kit software and is considered an integral part of the I/O Tool Kit software. As such, you reconfirm that you are Agree to the terms of the I/O Tool Kit Software License, which is incorporated by reference into this Agreement.
6. You agree to support your customers and licensees and acknowledge that SIXNET has no responsibility to support your applications, no responsibility to provide technical assistance to either you or your customers in regard to the web applications that you create, and that SIXNET has no knowledge or given no advice that you have relied upon in regard to the use or application that you may use this software for.
7. You are aware that SIXNET has embedded an identification code into the fast CGI program supplied as part of this license and can and will identify any SXIPm-WEB software that comes into our possession or knowledge as originating from your license. Any inquiries, liabilities or issues of any kind whatsoever that arise will be referred back to you and you agree to take full responsibility for the use of the software originally licensed by SIXNET to you. You are an OEM supplier and accept the responsibility for supporting the products you sell to your customers.
8. You Agree to include the following text embedded in each and every application that you publish that includes this licensed fast CGI software. This text may be integral to your own software License Notice and may accessed through a link such as this: [LICENSE NOTICE](#)
“This product includes software licensed from a third party that may not be used without permission of its owner. Further information is available upon request.”

I agree to the terms of this License Agreement, on behalf of the Organization or Company listed below. (This company name will be embedded into the licensed software.) I certify that I am an individual authorized to sign this Agreement on behalf of this Organization or Company.
