## **SIXNET's New Kevlar-Protected Ethernet Cabling**

SIXNET is proud to introduce its new CAT5E cable and cordsets (part # ET-RJF5E). Its high reliability, superior ruggedness and Kevlar protection make it a perfect choice for any industrial or military application. SIXNET declares that this will give you the assurance and peace of mind that your connections will be reliable for years to come. Save time and money by making low cost "box-to-box" cable connections – no conduit needed!

This Kevlar reinforced cable is super strong, yet highly flexible for easy routing. It is designed to resist UV, water and microbial penetration. Double shielded RJ45 plugs with Gold plated contacts prevent electro-magnetic interference while providing the best electrical contact and corrosion resistance. The cabling has a low smoke, halogen-free, flame-retardant (HFFR) Polyurethane jacket material (UL94V-0) that ensures personnel safety. The category 5E provides up to 1000BaseT connections. Operating at a temperature range of -40 to +85°C allows for this product to be used in many applications, such as railway, maritime or aerospace to name a few.

This new cable is available as bulk reels or pre-assembled in cordsets, either standard or custom lengths. This product is ideal for use with the 5-port IP67 water-proof switches and plugs, also new from SIXNET. For additional information about any of these new products, contact SIXNET at 518-877-5173, e-mail [sales@sixnetio.com](mailto:sales@sixnetio.com), or visit SIXNET online at <http://www.sixnetio.com>.
